

Document Title

First Author Name Second Author Name

August 28, 2013

Contents

1 Section Name

Paragraph text. Link to <http://www.cornell.edu> using `\url`.

1.1 Subsection Name

Paragraph text. Link to www.cornell.edu using `\href`.

1.1.1 SubSubSection Name

Paragraph text with footnote¹.

Paragraph Name Paragraph text.

2 Including Images and Text

2.1 Images

Since we want to keep this to one file, we'll wrap the command to include an external image in a code ("verbatim") environment. To actually include the image, get rid of the `begin{verbatim}` and `end{verbatim}`. Make sure the images are in the same folder as the .tex file, or specify a path.

```
\begin{figure}[t]
\centering
\includegraphics[width=.5\textwidth]{filename.jpg}
\caption{This is a caption.}
\label{image-label}
\end{figure}
```

2.2 Other LaTeX files

You can break up the document into multiple files and combine the documents with `\input{filename.tex}`. This is useful if multiple people are contributing to a paper and are each in charge of a section.

¹This is is a footnote.
